We prevent diseases and improve the production in dairy herds

The product developed by veterinarians with almost 20 years of experience in the combating of Digital Dermatitis:

For prevention and treatment of Digital Dermatitis (Mortellaro) and other infections in the hoofs:

Tested in a Danish herd:

Before treatment:

After 3 weeks of treatment:
We prevent diseases and improve the production in dairy herds

Composition: Healthy Hoof consists of two approved Biocides, a soap and an adhesive to secure that the Biocides are connected to the lesions. PR.number 1928952

Treatment:

Spray: 1 part Healthy Hoof is mixed with 2 parts of water – spray once the day for 3 days in the week

Footh bath: 5 Litres of Healthy Hoof is used for 100 litres of water. Lead the animals through the bath 3 times the week.

Prevention:
When the infection is under control the use of Spray/Foot Bath can be reduced to once the week.

Please observe:
The improvement will first be recognized after 6 days.

The effect of Healthy Hoof is the following:
a) The microorganism will be killed and
b) The infection will be reduced and the inflammation will be calmed down.
c) During the following 3 weeks the healing will take place, the lesion will granulate from the sides as usual.

OBS! It is very important the hoofs and the foot bath are kept as clean as possible.
